Brand New Book ***** Print on Demand *****.The presence of hazardous materials or toxic chemicals at an incident location or other emergency situation adds a new dimension of risk to those handling and treating casualties. The fundamental difference between a hazardous materials incident and other emergencies is the potential for acute risk from contamination to both patient and responder. In some cases, traditional practices must be altered to avoid compounding a critical situation. Hospital emergency departments must protect their personnel and other people within the hospital, while providing the best care for the chemically contaminated patient. This guide is intended to help hospital emergency departments plan for incidents that involve hazardous materials and to improve their ability to respond to these incidents. To ensure appropriate and timely patient care, as well as optimal worker protection, emergency personnel must understand decontamination procedures and personal protective equipment, neither of which are routinely covered in the course of their professional training. They should also be aware of community resources that could be called upon to assist with an emergency response. Current training curricula for emergency room physicians and...
