

An Elementary Treatise on the Integral Calculus Founded on the Method of Rates or Fluxions

Filesize: 7.91 MB

Reviews

It is fantastic and great. It is written in easy words and phrases instead of confusing. I am just delighted to explain how this is actually the best book I have got read through during my individual life and might be the finest publication for ever.

(Prof. Murl Shanahan DDS)

AN ELEMENTARY TREATISE ON THE INTEGRAL CALCULUS FOUNDED ON THE METHOD OF RATES OR FLUXIONS

To get **An Elementary Treatise on the Integral Calculus Founded on the Method of Rates or Fluxions** eBook, you should refer to the hyperlink beneath and save the ebook or get access to additional information that are in conjunction with AN ELEMENTARY TREATISE ON THE INTEGRAL CALCULUS FOUNDED ON THE METHOD OF RATES OR FLUXIONS ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 28 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1881 Excerpt: . . . $2a x$, and $PR = 2y$, therefore $V = \int (2ax - x^2) dx$. Putting $x = a \sin \theta$, Double Integration. 121. When rectangular coordinates are used, the expression for the area generated by a line parallel to the axis of y and terminated by two curves is Let AB , in Fig. 13, be the initial, OC and CD the final position of the generating line, then the area is $ABDC$, which is enclosed by the curves yy and yy and by the straight lines If in equation (1) we substitute for $y_2 - y_1$ the equivalent expression dy , we have. $\int \int \frac{1}{2} dx$, (2) $\int a y dy$, which expresses the area in the form of a double integral. In this double integral the limits y_t and y_i for y , are functions of x , while a and b , the limits for x , are constants. 122. If the area is that of a closed curve y_t and y_2 are two values of y corresponding to the same value of x in the equation of the curve, and a and b are the values of x for which y_t and y_2 become equal, as represented by the dotted lines in Fig. 13. It is evident that the entire area may also be expressed in the form and that when either of the forms (2) or (3) is applied to the area of a closed curve the limits are completely determined by the equation of the curve. 123. The limits in either of the...
