Solution-processed Organic Solar Cells

By Fahmi Fariq Muhammad

LAP Lambert Academic Publishing Jul 2014, 2014.

Taschenbuch. Book Condition: Neu. 220x150x6 mm. This item is printed on demand - Print on Demand Neuware - The easy fabrication process and low material usage make solution-processed organic solar cells (OSCs) very attractive for electricity generation. The production of these devices on a commercial scale has been slow due to their relatively low power conversion efficiency and stability problem. It is expected that these obstacles can be surmounted with rigorous research studies actively being done in this field. Tris (8-hydroxyquinoline) metals (Mq3) are well known in the fabrication of organic light emitting diodes (OLED)s and also for their unique optoelectronic properties. Nevertheless, their employment in solution-processed organic solar cells is still rare. Little attention has been paid on the impact of these materials when applied in organic solar cells. Hence, benefiting from the properties of Mq3 and easy fabrication of solution-processed organic solar cell, the current book is focused on the studies that have been performed to utilize Alq3 and Gaq3 in solution-processed OSCs. 92 pp. Englisch.

Reviews

An extremely great ebook with lucid and perfect explanations. It is full of knowledge and wisdom Its been printed in an exceedingly straightforward way in fact it is merely right after i finished reading through this publication by which really transformed me, alter the way i believe.

-- **Spencer Fritsch**

An exceptional book and also the font utilized was intriguing to read. This is for all who statte there was not a worth reading. It is extremely difficult to leave it before concluding, once you begin to read the book.
