Structural Analysis of Plant Photosystem I

By Alexey Amunts

GRIN Verlag Okt 2011, 2011. Taschenbuch. Book Condition: Neu. 210x148x15 mm. This item is printed on demand - Print on Demand Neuware - Doctoral Thesis / Dissertation from the year 2010 in the subject Biology - Ecology, grade: -, Tel Aviv University, language: English, comment: The history of Science is nothing else but a Herculean effort of humans to study and resemble the great achievements of Nature. However, despite the recent immense efforts, one of the most hidden secrets of the living world, the one that underpins the survival of virtually all higher-life forms, is still obscure to a large extent. That is the process of photosynthesis. This process is responsible for creation and maintenance of aerobic life on Earth, directly through the generation of oxygen and indirectly through the subsequent biosynthesis of organic compounds that serve as fuel for life. , abstract: Photosystem I (PSI) is a multi-subunit and intricate membrane super-complex of protein and non-protein components that catalyzes one of the first steps of oxygenic photosynthesis. PSI captures sunlight through a highly sophisticated pigment network and consequently converts the solar energy into its chemical form providing essential food and fuel to power life on the Earth. PSI operates...
